Sheth L.U.J and Sir M.V. College
Python programming
Practical no: 8

Aim: to study the tuples in python programming.

1) Creating Tuples:

```
tuple = ("Tasmiya" , "Sammrin" , "Guddi" , "Sheefa")
print(tuple)
```

```
('Tasmiya', 'Sammrin', 'Guddi', 'Sheefa')
```

```
Flowers = ("Lilies","Roses","periwinkle","marigold","jasmine","tulip")
print(len(Flowers))
```

```
6
```

2) Access Tuple:

```
planets = ("mars","earth","venus","saturn","jupiter","pluto","moon")
print(planets[1:6])
```

```
('earth', 'venus', 'saturn', 'jupiter', 'pluto')
```

```
planets = ("mars","earth","venus","saturn","jupiter","pluto","moon")
print(planets[-3])
```

```
jupiter
```

```
colours = ("black","red","yellow","pink","purple")
if "red" in colours:
  print("yes, the red colour exists inside tuple")
```

```
yes, the red colour exists inside tuple
```

3) Update Tuple:

Tasmiya Jahagirdar,
F087.

Sheth L.U.J and Sir M.V. College
Python programming
Practical no: 8

```
thistuple = ("venus", "mars", "jupiter")
y = ("earth",)
thistuple += y

print(thistuple)
```

```
('venus', 'mars', 'jupiter', 'earth')
```

3) Unpack tuple:

```
name = ("Sammrin","Sheefa","Guddi","Tasmiya")
(Shaikh,Sayyed,Patel,Jahagirdar) = name
print(Shaikh)
print(Sayyed)
print(Patel)
print(Jahagirdar)
```

```
Sammrin
Sheefa
Guddi
Tasmiya
```

```
name = ("Sammrin","Sheefa","Guddi","Tasmiya")
(Shaikh,Sayyed,Patel,*Jahagirdar) = name
print(Shaikh)
print(Sayyed)
print(Patel)
print(Jahagirdar)
```

```
Sammrin
Sheefa
Guddi
['Tasmiya']
```

Tasmiya Jahagirdar,
F087.

Sheth L.U.J and Sir M.V. College
Python programming
Practical no: 8

```
thistuple = ("venus", "mars", "jupiter")
for i in range(len(thistuple)):
  print(thistuple[i])
```

```
venus
mars
jupiter
```

4)Join tuples:

```
num = (1,2,3,4,5)
num2 = (12,13,45,67)
tuple3 = num+num2
print(tuple3)
```

```
(1, 2, 3, 4, 5, 12, 13, 45, 67)
```

```
num = (1,2,3,4,5)
num2 = num*2
print(num2)
```

```
(1, 2, 3, 4, 5, 1, 2, 3, 4, 5)
```
